

Mobile Applications for VACCIMO

VACCIMO provides mobile applications for hospital to set the health alerts for customers. These applications don't require GPRS. It works on SMS. We provide two versions for each application J2ME and Symbian. J2ME will work on all java enabled phones. Symbian works on Symbian 3rd editions phones like Nokia N80. Please contact our support team for more details about phone compatibility. The hospital can empower attendant or nurse to set the health alerts. You need to add them as co-admin in the system. They can only set the alerts. They cannot login to the system.

We have two applications called cVACCI and pVACCI. cVACCI is for Child vaccination and general health alerts targeted for General hospitals. pVACCI is for PET vaccination and Pet health alerts targeted for Veterinary hospital. Based on your hospital type we request you install that application only.

We have multiple versions for multiple phones. If you don't know which file to use for your mobile, don't worry, from your phone browser, please select following link

General Hospital: <http://www.vaccimo.com/cvacci/>

Veterinary Hospital: <http://www.vaccimo.com/pvacci/>

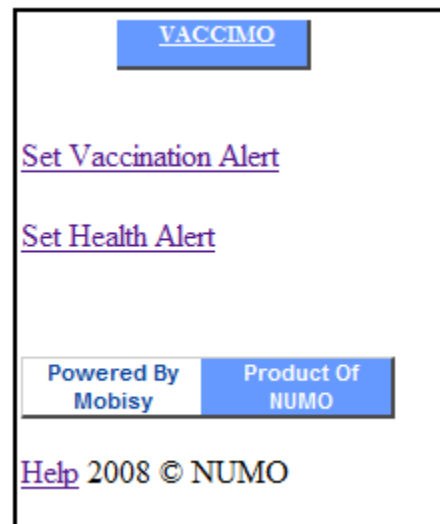

The application will read your phone type and install required file.

cVACCI

Child vaccination and Health alerts

Choose the type of the alert you want to set.

- Vaccination Alert
- Health Alert

Child Vaccination:

Mobile Number: Valid India mobile number

Date of Birth: Date of birth of child, should not be older than 1year.
